EDUCATION

Nanyang Technological University *Jan. 2025 – Present*
Part-time Ph.D. in Electrical and Electronic Engineering GPA: 4.17/5.0

University of Science and Technology of China *Sept. 2020 – June 2024*
B.S. in Physics Major: Applied Physics GPA: 3.21/4.3
Selected Courses: Electronic Circuits (93), Principle of Microcomputer (90)

Nanyang Technological University *July 2023 – Oct. 2023, Feb. 2024 – Apr. 2024*
Research internship in School of Electrical and Electronic Engineering

EXPERIENCES

Research Assistant / Part-time Ph.D. Student *Sept. 2024 – Present*
Advisor: Prof. Yun Yang; Ph.D. since Jan. 2025 *NTU EEE, Singapore*

- Developed an **equivalent-circuit model and model-enhanced frequency control** for self-resonant PCB-based hybrid wireless power transfer systems, validated by experiments.
- Developed **two-stage FEM-assisted optimization strategies** for compact PCB-based resonant couplers, including resistance and quality-factor optimization.
- Designed **PCB-based electromagnetic metasurfaces** for MHz wireless power transfer and validated their voltage enhancement through simulation and experiments.
- Contributed to the modeling and design of **inductive, capacitive, and hybrid wireless power transfer systems**, including stacked PCB couplers and misalignment-tolerant coil arrays.
- Built **data-driven models** to predict equivalent-circuit parameters of PCB couplers.

Development of Host Software for X-ray Photoelectron Spectroscopy *May 2024 – Apr. 2025*
Advisor: Prof. Changqing Feng *USTC, Hefei*

- Designed a **user interface** using PyQt5, providing an intuitive GUI for experimental operation.
- Developed and tested a communication module for reliable information exchange with FPGA and detector.

PCB-Based Wireless Power Resonator Research Internship *July 2023 – Oct. 2023, Feb. 2024 – Apr. 2024*
Advisor: Prof. Yun Yang *NTU, Singapore*

- Simulated polygonal planar spiral coils in HFSS and validated the design with PCB prototypes.
- Designed and optimized **13.56 MHz PCB resonators** with high quality factor for wireless power transfer.
- Developed an automated optimization workflow combining machine learning and finite element simulation.

Design of High-Voltage Circuits for MeV Gamma-Ray Detector *July 2022 – May 2023*
Advisor: Prof. Changqing Feng *USTC, Hefei*

- Designed the schematic and PCB of the power module for a MeV gamma-ray detector.
- Validated the power module and mitigated noise issues.

TECHNICAL STRENGTHS

Computer Languages	Python, MATLAB
Simulation Software	Ansys HFSS, Ansys Maxwell, COMSOL Multiphysics
English	TOEFL (87), IELTS (7.5), GRE (319+3.5)

HONORS AND AWARDS

Second Place Prize Paper Award, IEEE Transactions on Power Electronics, for a paper published in 2025 (co-author)
First Place, Student Design Competition, IEEE Wireless Power Technology Conference and Expo (WPTCE), Halifax, Nova Scotia, Canada, Jul. 2026
Best Paper Award, 20th IEEE Conference on Industrial Electronics & Applications (ICIEA, Aug. 2025)
Finalist Certificate, 2024 IEEE Global Student Wireless Power Competition (SWPC, May 2024)
Certificate of Merit & **Certificate of Third Prize**, The Student Competition on Electric Transportation Design – Automotive, Vessel and Aircraft (May 2024)

LEADERSHIP

President of the Student Union, School of Physical Science *Apr. 2022 – Apr. 2023*
